

“Learn ArcPad® in One Day”

Location: Tualatin, Oregon Date: August 11, 2010

In this one day seminar, participants will learn the basics of ArcPad® 8.0. The seminar is aimed at foresters, city workers, biologists, and professionals interested in learning how to use ArcPad® in a variety of situations. Special emphasis will be made on using ArcPad® to its fullest potential in difficult situations such as in dense tree canopy, around tall buildings, and in inclement weather.

Participants will learn how to navigate to existing points such as property markers, utilities, and anything else where existing coordinates are known.

Benefits from attending:

1. Learn the Basics of ArcPad® 8.0 in one day
2. Learn to Navigate like a pro.
3. Receive free eval copies of ArcPad® 8.0 & 10.0
4. Always collect data in the right coordinate system
5. Create new shape files from scratch in the field
6. Learn how to collect GPS offsets; fast, easy, and accurate

Pocket PCs with ArcPad® loaded will be provided to all participants. Everyone has a chance to learn hands-on throughout the seminar. The review of ArcPad done inside the classroom will allow participants to follow along on a Pocket PC as the instructor goes through the ArcPad setup and menus. This hands-on training is what makes this class so effective.

Participants are encouraged to bring their own Pocket PCs and GPS units if they have them. This gives the participant a chance to learn on their own equipment. All class data used in the seminar will be available on SD cards or Compact Flash cards for anyone bringing their own equipment.

All participants will receive a CD containing valuable information and programs. The CD contains a photo program that can be used to convert Tiff files to Geo Jpegs for use in ArcPad. Additional software includes a GPS Mission Planning program, an extension to ArcGIS® for adding sample plots to polygons, plus a picture editor program.

Please call Jon Aschenbach at 503-521-0888 for additional information or to sign up for the seminar.
