

## ArcPad 8.0 by ESRI

ArcPad® is the world's leading software package for mobile geographic information system (GIS) and field mapping applications.

It provides field-based personnel with the ability to capture, analyze, and display geographic information in near real time. Field data collection with ArcPad is efficient and accurate and can integrate input from GPS receivers, rangefinders, and digital cameras.

### Boost Mobile Productivity

Paper map books are mobile workers' traditional tools to locate

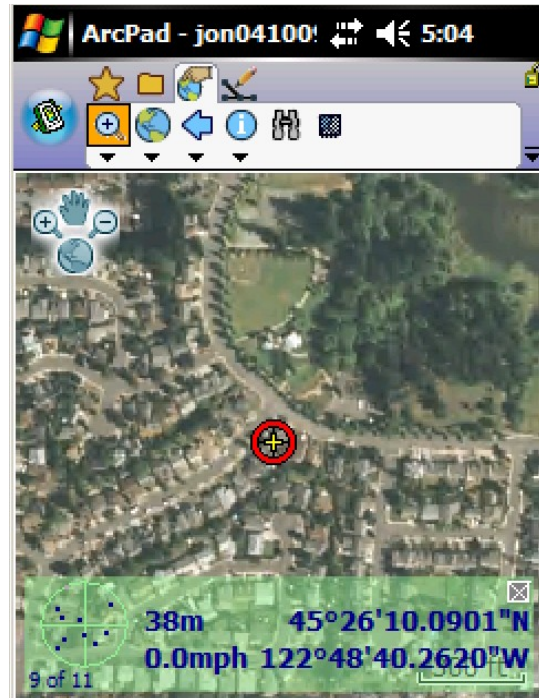

assets in the field. These are costly to produce, prone to error, and usually outdated by the time they are released to print. ArcPad is an affordable alternative, making it easy to collect multitudes of geographic information with great accuracy while on-site.

A key feature of ArcPad is the ability to display a variety of geographic

and attribute information. ArcPad uses data directly from an individual's desktop or an organization's enterprise GIS system without the need to convert to unique portable formats. ArcPad supports vector and raster data in a multilayered environment. Users can combine vector and raster data with the only limitations being the speed and memory capacity of the hardware in use.

ArcPad now includes the ArcPad Studio software which allows the user to make custom data input applications.

## ArcView 9.3 by ESRI

**ArcView** is geographic information system (GIS) software for visualizing, managing, creating, and analyzing geographic data. Using ArcView, you can understand the geographic context of your data, allowing you to see relationships and identify patterns in new ways.

With ArcView, you can

- **Author maps** and interact with your data by generating **reports** and **charts** and printing and embedding your maps in other documents and applications.
- **Save time** using map **templates** to create consistent style in your maps.
- Build process models, scripts, and workflows to **visualize** and **analyze** your data.
- Read, import, and manage more than **70 different data types** and formats including demographics, facilities, CAD drawings, imagery, Web services, multimedia, and metadata.
- **Communicate** more efficiently by printing, publishing, and **sharing** your GIS data and dynamic content with others.
- Use tools such as Find, Identify, Measure, and Hyperlink to **discover information** not available when working with static paper maps.
- Make better decisions and **solve problems** faster.

Resource Supply, LLC is an ESRI Business Partner. We can sell you ArcView and help you get started. ArcView is a very capable program, allowing users to make beautiful maps, calculate acreage, and incorporate imagery with points, lines and polygons. The tutorial with ArcView is exceptional.

Everyone who purchases ArcView from Resource Supply, LLC will receive a free extension that allows users to create plot grids for sample points. The extension is very easy to install and comes with a set of special instructions made by Resource Supply, LLC for making plot grids and how to rotate the grids to meet your needs. It is super easy and very powerful.
