

“Nomad Pocket PCs With 806 MHz Processors and VGA Screen Resolution”

The TDS Nomad Pocket PCs have an 806 MHz processor, a long battery life, and integrated Bluetooth. They are waterproof, shock proof and include a high-resolution, sunlight visible VGA screen that shows maps and graphics in crisp detail. The screen is 480 x 640 pixels, which is four times as many pixels as most Pocket PCs.

While the Nomads come with either a rocker pad or a 10 key pad, almost everyone buys the 10 key pad. It allows easy entry of numeric data and still provides easy movement around the screen with the arrow keys, tab key, and enter key. The top row of keys can be re-defined as scroll left, scroll down, scroll up, and scroll right for added flexibility in moving around the screen. The 10 Key pad is very tactile, and allows numbers to be entered quickly and accurately.

The Nomad comes with at least 512 megs of Flash Memory, up to one Gigabyte for the L models and 2 Gigabytes for the X models. Data can be stored on an SD or Compact Flash memory cards in the 800B and 800L models. All models except the 800B include a built-in GPS unit.

The Nomad Pocket PCs are perfect for use in rain, dust, or any other kind of inclement weather. They meet the MIL-STD-810F standard for drops on hard surfaces and also come with the IP67 ratings for water submersion for up to 30 minutes.

The Nomads screen is a true VGA resolution. It is very easy to read in bright sunlight. This is very helpful when using the Nomad with color imagery and GIS data. With the backlight, the Nomad is usable in total darkness.

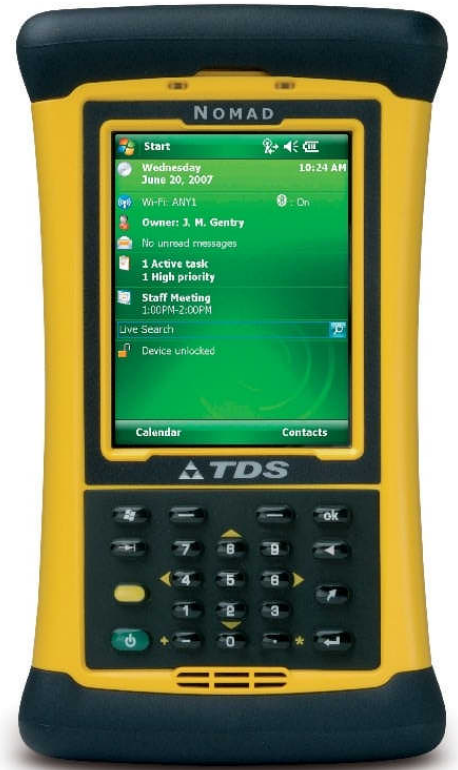

The X Models of the Nomad have just been released. They have 2 Gigabytes of flash memory and Wireless Wide Area Network capability. WWAN refers to wireless high-speed data networks covering a large geographic area. They also work with WLAN, Wireless Local Area Networks (802.11 Wi-Fi).

#TDSNomad800B \$1,675.00
 #TDSNomad800L \$1,875.00
 #TDSNomad800LC \$2,075.00
 #TDSNomad800LE \$2,475.00
 #TDSNomad800X \$2,375.00
 #TDSNomad800XC \$2,575.00
 #TDSNomad800XE \$2,975.00

Nomad Series Pocket PCs—Specifications

Standard Specifications for all models:

Windows Mobile 6.0 (Classic Edition)
Marvell 806 MHz XScale processor
128 MB DDR SDRAM
512 MB to 1 or 2 GB nonvolatile Flash storage
Full VGA, sunlight-readable color screen
Rugged submersible design
Integrated speaker and microphone
Integrated Bluetooth 2.0
Compact Flash (CF) (Type II) slot
Secure Digital (SDIO) Slot
Notification LEDs
USB host and client
Audio jack
15 hour battery life (default settings)
Keypad backlighting for night use
12-month limited warranty

Standard Accessories:

Rechargeable Li-Ion battery module
Rugged stylus with spring-loaded tip
Lanyard
AC charger
USB Data Cable
User guide
Hand strap
Screen protectors
Getting Started CD with ActiveSync

Weight: 21 ounces with battery

Size: 6.92" x 3.92" x 1.96"

Operating Temperature: -22 to 140 °F

Suggested Options:

Deluxe Case—\$40.00

Specifications for Nomad 800L

The Nomad 800L includes one Gigabyte of flash memory, 802.11 Wi-Fi, and a built-in GPS unit. The GPS is a SiRFStarIII which works reasonably well under tree canopy. GPS units such as the SXBlue II GPS can be used with the Nomad 800L to provide sub meter accuracy.

Specifications for the Nomad 800LC

The Nomad 800LC is like the 800L with the addition of a 2 megapixel camera. The camera uses the Windows Mobile 6 protocol and can be used to attach image files to GIS data as an attribute. This works exceptionally well for programs such as ArcPad by ESRI. To facilitate the inclusion of a camera, flash memory may only be added with an SD card.

Specifications for the Nomad 800LE

The Nomad 800LE is similar to the Nomad 800LC with the addition of a built-in bar code scanner.

Specifications for the Nomad 800X versions

The Nomad 800X models have 2 Gigabytes of flash memory and Wireless Wide Area Network capability. WWAN refers to wireless high-speed data networks covering a large geographic area. They also work with WLAN, the 802.11 Wi-Fi Wireless Local Area Networks.

Note: All Nomad Pocket PCs have persistent memory. This means both data and added programs are safe, even if battery power is totally lost.
