

“TDS Ranger Pocket PCs For Timber Cruising, Log Scaling and Data Collection”

The TDS Ranger provides users with a reliable, rugged, and easy to use handheld. It contains a full numeric and alphabetic keyboard suitable for a variety of data entry. The Ranger is a favorite for log scalers and timber cruisers who need to enter alpha as well as numeric data.

The Ranger meets rigorous MIL-STD-810F military standards for drops, vibration, humidity, and extreme temperatures. With its IP67 rating, it is impervious to water and dust. The screen is vibrant and viewable in bright sunlight to total darkness and everything in between.

Even though it weighs just over two pounds, the Ranger is easy to hold. The numeric keypad is in the center portion of the unit, allowing easy entry of numeric data..

The Ranger is available in both 312 MHz and 520 MHz processor speeds. The 312 MHz processor is standard on the 300X and the 520 MHz processor is standard on the 500X model.

The Ranger Pocket PCs with Bluetooth are a perfect companion with the SXBlue II GPS unit. This combination gives the user the capability to collect sub-meter GPS positions. Both the Rangers and the SXBlue are waterproof and rugged, so they work in almost any environment. There are no cables between the SXBlue II GPS unit and the Rangers with Bluetooth. This make use in rugged environments a perfect fit.

#TDSRanger300X	Price:\$2,325.00

Ranger Collecting Culvert Data

Note: All Ranger Pocket PCs have persistent memory. This means both saved data and added programs are safe, even if battery power is totally lost.
